

Tim Gradnik is working as a Research Engineer at the Physical-Chemical Transformer diagnostics Department of the Milan Vidmar Electric Power Research Institute. He received his M.Sc.E.E. degree in High-Voltage Engineering from Faculty of Electrical Engineering, University of Ljubljana.

His work involves research and development in power transformer thermal modelling, transformer on-line monitoring and diagnostics, and lifetime optimization of power transformers.

He is an active member of IEC TC 14 MT60076-7 (Power transformers: Loading guide), CIGRE WG A2.38 (Power transformers: Thermal modelling), CIGRE WG D1.52 (Moisture Measurement in Insulating Fluids and Transformer Insulation).
